Growth Hormone RNA levels correlate with states of somatotroph differentiation in rat MtT pituitary cell lines.

Comparison of MtT/ cell lines which all derive from MtT/F84 cells, a pituitary tumor from Fisher F344 rats.

	MtT/E	MtT/Se	MtT/SM	MtT/S
Hormones	none	GH	GH and PRL	GH
Size (μm^3)	11.8	10.4	12.7	12.5
Shape	spindle	round	ovoid	round
Doubling time (hr)	55	24	50	43
Estrogen sensitivity?	independent	dependent	slight sensitivity	independent
