Astronomy II
Topic: UGC 10214

*At a recently reduced price of just 1.01 Exa-Swiss francs,
the Tadpole is a steal!*

THE TADPOLE GALAXY IS FOR YOU!

- The Tadpole is a dynamic, graceful looking galaxy that sports a number of desirable features for any investor. A spiral galaxy that has long attracted visits from the rich and famous seeking a location that is a clear “step up” from the run-of-the-mill field spiral, all rights for taxation and planetary zoning are being made available in this sale. New owners will also have access to one of the fastest high-speed wormhole networks of any galaxy in the known universe, with available intergalactic ports to other highly desirable destinations such as the Virgo and Fornax clusters as well as the Great Void.
- The Tadpole derives its glamorous appearance from a previous galactic collision. The survival of this spiral demonstrates its hardiness (or luck, which is even better). The good news is that with such a close interaction having already occurred, a future collision of a similar kind is unlikely, making the Tadpole prime cosmic real estate for commercial development.
- Features: With ample clouds of gas and a substantial number of young and massive stars, the Tadpole is a galaxy with ongoing star formation. Its full length is an impression 0.3 mega light years. From Earth the Tadpole is located in the constellation of Draco at a distance of just over 400 mega light years. Like other spirals, the Tadpole has a halo and harbors dark matter.

Own the Tadpole, and be proud of your little corner of the cosmic pond!
