

Calculus 3

Chapter 15. Multiple Integrals

15.2. Double Integrals over General Regions—Examples and Proofs of Theorems

Table of contents

1 Exercise 15.2.20

2 Exercise 15.2.40

3 Exercise 15.2.50

4 Exercise 15.2.58

5 Exercise 15.2.76

Exercise 15.2.20

Exercise 15.2.20. Sketch the region of integration and evaluate the double integral $\int_0^{\pi} \int_0^{\sin x} y \, dy \, dx$.

Solution. The region is:

Exercise 15.2.20

Exercise 15.2.20. Sketch the region of integration and evaluate the

double integral $\int_0^{\pi} \int_0^{\sin x} y \, dy \, dx$.

Solution. The region is:

We evaluate the iterated integral as:

$$\int_0^{\pi} \int_0^{\sin x} y \, dy \, dx = \int_0^{\pi} \left. \frac{y^2}{2} \right|_{y=0}^{y=\sin x} dx = \int_0^{\pi} \frac{\sin^2 x}{2} - 0 \, dx$$

Exercise 15.2.20

Exercise 15.2.20. Sketch the region of integration and evaluate the

double integral $\int_0^\pi \int_0^{\sin x} y \, dy \, dx$.

Solution. The region is:

We evaluate the iterated integral as:

$$\int_0^\pi \int_0^{\sin x} y \, dy \, dx = \int_0^\pi \left. \frac{y^2}{2} \right|_{y=0}^{y=\sin x} dx = \int_0^\pi \frac{\sin^2 x}{2} - 0 \, dx$$

Exercise 15.2.20 (continued)

Exercise 15.2.20. Sketch the region of integration and evaluate the double integral $\int_0^{\pi} \int_0^{\sin x} y \, dy \, dx$.

Solution (continued).

$$\begin{aligned} &= \int_0^{\pi} \frac{1}{2} \frac{1 - \cos 2x}{2} \, dx \text{ since } \sin^2 x = \frac{1 - \cos 2x}{2} \\ &= \frac{x}{4} - \frac{\sin 2x}{8} \Big|_{x=0}^{x=\pi} = \left(\frac{\pi}{4} - \frac{\sin 2\pi}{8} \right) - (0) = \frac{\pi}{4}. \end{aligned}$$

Exercise 15.2.40

Exercise 15.2.40. Sketch the region of integration and write the equivalent double integral with the order of integration reverse:

$$\int_0^2 \int_0^{4-y^2} y \, dx \, dy.$$

Solution. We first have x ranging from 0 to $4 - y^2$, and second y ranges from 0 to 2. So the region is:

Exercise 15.2.40

Exercise 15.2.40. Sketch the region of integration and write the equivalent double integral with the order of integration reverse:

$$\int_0^2 \int_0^{4-y^2} y \, dx \, dy.$$

Solution. We first have x ranging from 0 to $4 - y^2$, and second y ranges from 0 to 2. So the region is:

Now we can interpret that first y ranges from 0 to the curve $x = 4 - y^2$ (or $y = \sqrt{4 - x}$, since $y \geq 0$ on the region) and second x ranges from 0 to 4. So the integral becomes

$$\int_0^4 \int_0^{\sqrt{4-x}} y \, dy \, dx. \quad \square$$

Exercise 15.2.40

Exercise 15.2.40. Sketch the region of integration and write the equivalent double integral with the order of integration reverse:

$$\int_0^2 \int_0^{4-y^2} y \, dx \, dy.$$

Solution. We first have x ranging from 0 to $4 - y^2$, and second y ranges from 0 to 2. So the region is:

Now we can interpret that first y ranges from 0 to the curve $x = 4 - y^2$ (or $y = \sqrt{4 - x}$, since $y \geq 0$ on the region) and second x ranges from 0 to 4. So the integral becomes

$$\int_0^4 \int_0^{\sqrt{4-x}} y \, dy \, dx.$$

Exercise 15.2.50

Exercise 15.2.50. Sketch the region of integration, reverse the order of integration, and evaluate the integral:

$$\int_0^2 \int_0^{4-x^2} \frac{xe^{2y}}{4-y} dy dx.$$

Solution. We first have y ranging from 0 to $4 - x^2$, and second x ranges from 0 to 2. So the region is:

Exercise 15.2.50

Exercise 15.2.50. Sketch the region of integration, reverse the order of integration, and evaluate the integral:

$$\int_0^2 \int_0^{4-x^2} \frac{xe^{2y}}{4-y} dy dx.$$

Solution. We first have y ranging from 0 to $4 - x^2$, and second x ranges from 0 to 2. So the region is:

Now we can interpret that first x ranges from 0 to the curve $y = 4 - x^2$ (or $x = \sqrt{4 - y}$, since $x \geq 0$ on the region) and second y ranges from 0 to 4. So the integral becomes

$$\int_0^4 \int_0^{\sqrt{4-y}} \frac{xe^{2y}}{4-y} dx dy.$$

Exercise 15.2.50

Exercise 15.2.50. Sketch the region of integration, reverse the order of integration, and evaluate the integral:

$$\int_0^2 \int_0^{4-x^2} \frac{xe^{2y}}{4-y} dy dx.$$

Solution. We first have y ranging from 0 to $4 - x^2$, and second x ranges from 0 to 2. So the region is:

Now we can interpret that first x ranges from 0 to the curve $y = 4 - x^2$ (or $x = \sqrt{4 - y}$, since $x \geq 0$ on the region) and second y ranges from 0 to 4. So the integral becomes

$$\int_0^4 \int_0^{\sqrt{4-y}} \frac{xe^{2y}}{4-y} dx dy.$$

Exercise 15.2.50 (continued)

Exercise 15.2.50. Sketch the region of integration, reverse the order of integration, and evaluate the integral:

$$\int_0^2 \int_0^{4-x^2} \frac{xe^{2y}}{4-y} dy dx.$$

Solution (continued). We now evaluate the new iterated integral:

$$\begin{aligned} \int_0^4 \int_0^{\sqrt{4-y}} \frac{xe^{2y}}{4-y} dx dy &= \int_0^4 \frac{x^2 e^{2y}}{2(4-y)} \Big|_{x=0}^{x=\sqrt{4-y}} dy \\ &= \int_0^4 \frac{(\sqrt{4-y})^2 e^{2y}}{2(4-y)} - 0 dy = \int_0^4 \frac{(4-y)e^{2y}}{2(4-y)} dy = \int_0^4 \frac{e^{2y}}{2} dy \\ &= \frac{e^{2y}}{4} \Big|_{y=0}^{y=4} = \frac{e^{2(4)}}{4} - \frac{e^{2(0)}}{4} = \frac{e^8 - 1}{4}. \end{aligned}$$

Exercise 15.2.58

Exercise 15.2.58. Find the volume of the solid that is bounded above the cylinder $z = x^2$ and below by the region enclosed by the parabola $y = 2 - x^2$ and the line $y = x$ in the xy -plane.

Solution. The region R is:

Exercise 15.2.58

Exercise 15.2.58. Find the volume of the solid that is bounded above the cylinder $z = x^2$ and below by the region enclosed by the parabola $y = 2 - x^2$ and the line $y = x$ in the xy -plane.

Solution. The region R is:

First y ranges from x to $2 - x^2$, and second x ranges from -2 to 1 . Since $z = f(x, y) = x^2$ is nonnegative over R then the desired volume is

$$V = \int_{-2}^1 \int_x^{2-x^2} x^2 dy dx.$$

Exercise 15.2.58

Exercise 15.2.58. Find the volume of the solid that is bounded above the cylinder $z = x^2$ and below by the region enclosed by the parabola $y = 2 - x^2$ and the line $y = x$ in the xy -plane.

Solution. The region R is:

First y ranges from x to $2 - x^2$, and second x ranges from -2 to 1 . Since $z = f(x, y) = x^2$ is nonnegative over R then the desired volume is

$$V = \int_{-2}^1 \int_x^{2-x^2} x^2 \, dy \, dx.$$

Exercise 15.2.58 (continued)

Solution (continued). So the volume is

$$\begin{aligned}
 V &= \int_{-2}^1 \int_x^{2-x^2} x^2 \, dy \, dx = \int_{-2}^1 x^2 y \Big|_{y=x}^{y=2-x^2} \, dx \\
 &= \int_{-2}^1 x^2(2-x^2) - x^2(x) \, dx = \int_{-2}^1 2x^2 - x^4 - x^3 \, dx = \frac{2x^3}{3} - \frac{x^5}{5} - \frac{x^4}{4} \Big|_{x=-2}^{x=1} \\
 &= \left(\frac{2(1)^3}{3} - \frac{(1)^5}{5} - \frac{(1)^4}{4} \right) - \left(\frac{2(-2)^3}{3} - \frac{(-2)^5}{5} - \frac{(-2)^4}{4} \right) \\
 &= \frac{2}{3} - \frac{1}{5} - \frac{1}{4} + \frac{16}{3} - \frac{32}{5} + 4 = \frac{40}{60} - \frac{12}{60} - \frac{15}{60} + \frac{320}{60} - \frac{384}{60} + \frac{240}{60} = \frac{189}{60} = \frac{63}{20}.
 \end{aligned}$$

□

Exercise 15.2.76

Exercise 15.2.76. (Unbounded Region) Integrate

$$f(x, y) = \frac{1}{(x^2 - x)(y - 1)^{2/3}} \text{ over the infinite rectangle } 2 \leq x < \infty, \\ 0 \leq y \leq 2.$$

Solution. We want to find $\int_2^\infty \int_0^2 \frac{1}{(x^2 - x)(y - 1)^{2/3}} dy dx$. This is an improper integral and so we write it as a limit:

$$\begin{aligned} \int_2^\infty \int_0^2 \frac{1}{(x^2 - x)(y - 1)^{2/3}} dy dx &= \lim_{b \rightarrow \infty} \int_2^b \int_0^2 \frac{1}{(x^2 - x)(y - 1)^{2/3}} dy dx \\ &= \lim_{b \rightarrow \infty} \int_2^b \frac{1}{x^2 - x} \left. \frac{(y - 1)^{1/3}}{1/3} \right|_{y=0}^{y=2} dx \\ &= \lim_{b \rightarrow \infty} \int_2^b \frac{1}{x^2 - x} 3((2) - 1)^{1/3} - \frac{1}{x^2 - x} 3((0) - 1)^{1/3} dx \end{aligned}$$

Exercise 15.2.76

Exercise 15.2.76. (Unbounded Region) Integrate

$$f(x, y) = \frac{1}{(x^2 - x)(y - 1)^{2/3}} \text{ over the infinite rectangle } 2 \leq x < \infty, \\ 0 \leq y \leq 2.$$

Solution. We want to find $\int_2^\infty \int_0^2 \frac{1}{(x^2 - x)(y - 1)^{2/3}} dy dx$. This is an improper integral and so we write it as a limit:

$$\begin{aligned} \int_2^\infty \int_0^2 \frac{1}{(x^2 - x)(y - 1)^{2/3}} dy dx &= \lim_{b \rightarrow \infty} \int_2^b \int_0^2 \frac{1}{(x^2 - x)(y - 1)^{2/3}} dy dx \\ &= \lim_{b \rightarrow \infty} \int_2^b \frac{1}{x^2 - x} \left. \frac{(y - 1)^{1/3}}{1/3} \right|_{y=0}^{y=2} dx \\ &= \lim_{b \rightarrow \infty} \int_2^b \frac{1}{x^2 - x} 3((2) - 1)^{1/3} - \frac{1}{x^2 - x} 3((0) - 1)^{1/3} dx \end{aligned}$$

Exercise 15.2.76 (continued)

Exercise 15.2.76. (Unbounded Region) Integrate

$$f(x, y) = \frac{1}{(x^2 - x)(y - 1)^{2/3}}$$

over the infinite rectangle $2 \leq x < \infty$,
 $0 \leq y \leq 2$.

Solution (continued).

$$= \lim_{b \rightarrow \infty} \int_2^b \frac{6}{x^2 - x} dx = 6 \lim_{b \rightarrow \infty} \int_2^b \frac{1}{x - 1} - \frac{1}{x} dx \text{ by partial fractions}$$

$$= 6 \lim_{b \rightarrow \infty} (\ln(x - 1) - \ln x) \Big|_{x=2}^{x=b} = 6 \lim_{b \rightarrow \infty} \ln \left(\frac{x - 1}{x} \right) \Big|_{x=2}^{x=b}$$

$$= 6 \lim_{b \rightarrow \infty} \ln \left(\frac{b - 1}{b} \right) - 6 \ln \left(\frac{(2) - 1}{2} \right) = -6 \ln(1/2) = 6 \ln 2.$$
