

Section 6.2. The Method of Joints

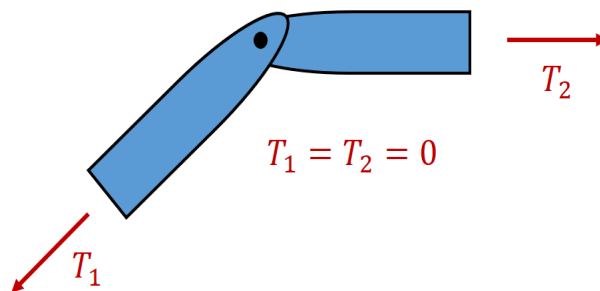

Note. In this section we consider loads on trusses. We will calculate reactions and axial forces on members.

Note. We can simplify things in three special joint cases:

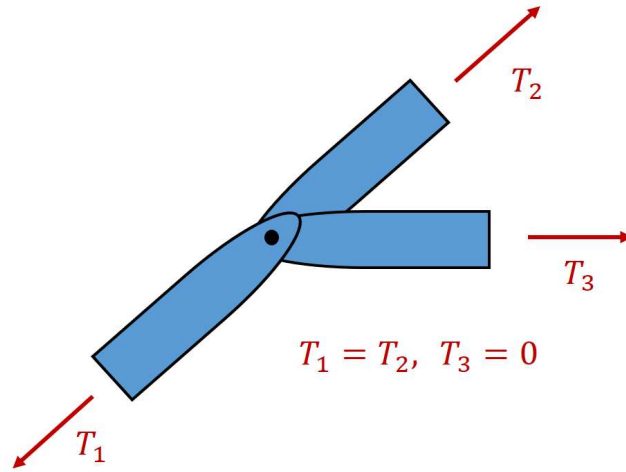

1. Two collinear members with no load:

2. Two noncollinear members with no load:

3. Three members, two collinear and no load:

Example. Page 282 Number 6.11.
