

URHP MATHEMATICS AND STATISTICS HONORS ENRICHMENT PROPOSAL FORM

Honors enriched sections of classes carry the section number 088. Honors enriched mathematics and statistics classes are taught along with the corresponding regular class, but the instructor and URHP student meet outside of class to process the honors enrichment component. In order to get a math or stats class approved as honors enriched, a list of planned enrichment experiences must be submit in writing to the Mathematics and Statistics URHP Coordinator by the end of the first week of class. When approved by the coordinator, the student drops the regular class, an honors enhanced section (numbered 088) is created, and the student adds the honors section (which requires a permit that the departmental executive aid will create when the 088 section is created). The proposal must consist of (1) an abstract describing the project, (2) a brief literature review which contains at least three written works (i.e., books or research articles—websites may be included, but at least three of the references must be non-web-based), and (3) this cover sheet with the signature of the student, instructor, and Mathematics and Statistics URHP Coordinator (signatures may be electronic). Every approved honors-enhancement proposal must include plans for a written report (the length of which must be in the abstract) and an oral presentation!
